MindBridge

A Student Study Planner and Mental Well-being Platform

Abstract

Students face constant academic pressure, tight deadlines and limited time to manage both studies and mental well-being. MindBridge is a student-focused web application that combines study management and emotional support on one platform, helping students stay organised, focused and mentally balanced. Its standout feature, Smart Study Recommendations, suggests what to study next based on deadlines, priorities and the time available.

Key Features

- **Core and design:** secure registration and login, student dashboard, personalised profile, dark mode, smooth animations and a responsive layout.
- **Productivity and analytics:** study planner, focus timer, exam countdown, smart reminders, weekly analytics, progress tracking and charts.
- **Well-being and support:** mood tracker, personal journal, daily reflection, interactive breathing guide, relaxation activities and support centre.
- **Security and privacy:** protected user data, secure login, and journal and mood entries accessible only to their owners.

Technologies Used

- **Front end:** HTML5 for structure, CSS3 for styling, themes and animations, JavaScript for interactivity.
- **Data and charts:** browser or database storage for user accounts and entries, with a charting library for progress graphs.
- **Security:** password hashing, session-based login and per-user access control.

Software Required

- Code editor: Visual Studio Code.
- Web browser for testing: Google Chrome or Microsoft Edge.
- Version control and teamwork: Git and GitHub.
- Design and documentation: Canva or Figma, and MS Word.

Implementation Process

- **Planning:** collect requirements, finalise features and divide work among three team members.
- **Design:** create wireframes, colour theme and common navigation for all pages.
- **Development:** build the core layout, login and dashboard; the well-being section; and the study productivity section with analytics.
- **Integration and testing:** combine all modules, check privacy rules, and test on mobile and desktop screens.
- **Deployment:** finalise the project and prepare documentation and demonstration.

User Interface Guidelines

- Clean, simple layout with consistent navigation, colours and fonts on every page.
- Calm colours and a dark mode option to reduce eye strain and support a relaxing experience.
- Responsive pages that adjust to mobile, tablet and desktop screens.
- Clear buttons, labels and feedback messages so students can use each feature easily.

Expected Outcome

A complete, user-friendly website that helps students plan their studies, track progress and care for their mental health in one place, reducing stress and improving academic performance.
